Art Unit: 2874

Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 1-22, drawn to a method for fusing glass optical fibers together, classified in class 65, subclass 408.

II. Claims 23-40, drawn to an optical device, classified in class 385, subclass 37.

1. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product as claimed can be made by another and materially different process, such as, the optical grating can be formed by thermal diffusion or using electron beam instead of exposing the optical fiber to UV light.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Any inquiry concerning this communication should be directed to Hung Ngo at telephone number (703) 308-0297.
